"Emma Ross is the smartest scientific mind in the defense bar for products liability litigation." — *Legal 500*

"Emma is brilliant." — *Chambers USA*

"Emma Ross is a multi-tool player – a great trial lawyer and one of the sharpest science minds in the defense bar." — *Legal 500*

"Emma Ross is one of the most intelligent people I have ever met, and she somehow retains her ability to clearly convey complex scientific and medical principles to the jury." — *Legal 500*

"She develops cutting-edge legal strategies and is a pleasure to work with." — *Chambers USA*

A surgeon by training, Emma Ross has built a career at the intersection of trial lawyer and science whiz. Emma possesses a unique ability to shape science-forward litigation themes that win bet-the-company cases—and then to deliver those themes in a courtroom. Emma believes that judges and juries can understand thorny scientific issues when they are explained well. Explaining them well is where Emma excels. With this skill, Emma helps her clients win trials and achieve litigation-dispositive results in complex products liability and commercial cases.

Earlier this year, Merck selected Emma as trial counsel in the first jury trial over Gardasil, Merck's HPV vaccine. The trial, which took place in California state court, was not just the first HPV vaccine trial—it was also the first time any routine recommended childhood vaccine covered by the Vaccine Act had ever proceeded to a U.S. jury trial. Emma crossed and presented key witnesses, including the critical causation expert and both company scientists. After three weeks of trial, the trial was adjourned at plaintiff's counsel's request, with no money paid. Shortly thereafter, a federal judge overseeing the Gardasil multidistrict litigation (where Emma heads science and expert strategy) granted summary judgment on preemption. Emma also serves as trial counsel for Bayer, representing the company in some of its most challenging cases and difficult jurisdictions. For instance, Emma handled the cross of key witnesses in a 2022 St. Louis Roundup trial, where she and partners Tarek Ismail and Shayna Cook would secure a complete defense verdict after less than two hours of jury deliberations.

Emma is as skilled leading a science team as she is serving as trial counsel. In addition to her trial role in the Gardasil litigation, as science team lead Emma has taken the critical initial depositions of plaintiff's experts, cross examined those experts at key admissibility hearings, and presented on Gardasil's safety and effectiveness at a court-requested "science day." And in the Roundup litigation, Emma led a Goldman Ismail team that played a

key role in reshaping litigation-wide science themes in how we explain the origin of cancer, helping drive a wave of trial victories for Bayer. Her recent successes build on early experience as a key member of Goldman Ismail-led defense teams that successfully excluded all of plaintiffs' causation experts in two separate Mirena MDLs. Without reliable causation evidence, the defense argued that no plaintiff could prove her injuries, requiring dismissal of all claims. The district and appellate courts agreed, twice.

Emma maintains a robust *pro bono* practice focusing on reproductive justice and antiracism. She recently led a Goldman Ismail team advocating on behalf of women who received coerced, unindicated, and unconsented gynecologic care while in immigration detention. She is also the emeritus co-chair of the Reproductive Justice Working Group of the Law Firm Antiracism Alliance, an organization that aims to harness the resources of the private bar in the effort to end systemic racism. With partner Shayna Cook, Emma has also presented in multiple forums on lawyer well-being and the evidence-based interventions we can embrace to improve it.

Representative Litigation

Gardasil Litigation

Represents Merck as trial counsel and co-leads the expert and science team in state and federal litigation involving Merck's HPV vaccine. In early 2025, Merck tapped Emma to serve as trial counsel in *Robi v. Merck*, the first Gardasil case to proceed in trial. The case was adjourned and the jury dismissed with zero dollars paid after three weeks of trial in Los Angeles Superior Court. Earlier, Emma deposed key opposing experts and presented at the MDL Science Day on Gardasil's safety, effectiveness, and the lack of reliable scientific support that Gardasil causes the injuries plaintiffs allege.

In re Roundup Products Liability Litigation

Trial counsel for Bayer, including *Ferro v. Monsanto*, tried to a full defense verdict in November 2022, where Emma cross-examined both of plaintiffs' general causation experts. Emma has since represented Bayer in several multi-plaintiff Roundup trials in St. Louis that settled mid-trial or before trial commenced. Since 2018, Emma has played a leadership role on the national science and expert team in nationwide Roundup products liability litigation, taking key depositions of plaintiffs' causation experts, advising on overall strategy, and developing science themes (and experts to deliver them) that reshaped litigation-wide defensive strategy.

Insulin Pump Litigation

Represents Medtronic in products liability cases nationwide involving the NGP 600 Series insulin pumps.

Consumer Electronics Litigation

Represented a Fortune 10 consumer-electronics company in patent-infringement cases relating to telecommunications, user-interface, computer-security, and battery technologies. Following the dismissal of several of these suits, the remaining actions are pending in the summary-judgment and discovery phases.

In re Mirena IUD Products Liability Litigation

Played key roles in two separate Mirena MDLs, serving on national strategy and science teams that achieved litigation-dispositive *Daubert* and summary-judgment victories. Involved in fact and expert discovery, including the development of science themes, coordination with discovery teams, expert depositions and *Daubert* strategy, and defense of key company scientific witnesses.

In re Ethicon Inc., Pelvic Repair System Products Liability Litigation

Represented Johnson & Johnson and Ethicon in federal MDL concerning prescription pelvic mesh products used for the treatment of pelvic organ prolapse and stress incontinence.

Spilker v. Medtronic, Inc.

Represented Medtronic in a product liability action concerning its cardiac cryoablation device. Coordinated defense expert development.
